Message:

- 1** – Clear navigation panel, with all subcategories listed upon expansion. Can see that a subcategory expands by looking at the position of the arrow. Eliminates needs for tabs anywhere else on the page.
- 2** – Under each main header (ex: Academics), there are subheadings which can be used to group related links. This eliminates the dropdown option, which has multiple unrelated links.
- 3** – Bolded section to stand out – this is a personalization feature for return users.
- 4** – Clear option to pin this page to your favourites.
- 5** – These links normally did not lead to any other page; these links now clearly link to a pop-up email window. Users can directly email their advisor from here.
- 6** – Users now have the option to go back a page. This along with addition **1** eliminates the need for unnecessary navigational links elsewhere on the page.

7 – Current page is highlighted on side bar so user can easily see where they currently are and can have an easier time finding their next destination

8 – One page per subcategory – removes the need for the confusing tabs seen in the screenshots before.

9 – Alternate options to help the user in finding answers when this option is not available yet. Does not leave user with vague answer/lead them to giving up due to not finding what they need.
